## TECHNICAL CHARACTERISTICS

### Dimensions

Bred Entry panel (W x H x D)  
94mm x 170mm x 30mm

GSM Unit (W x H x D)  
70mm x 139mm x 40mm

## MAIN FEATURES

- Very cost-effective system, it doesn't require wires to be run back inside the property
- Great security as the users can answer from anywhere, giving the impression that they are at home
- The entry panel appearance is the same used in other wired installation so the visitor cannot see it is a GSM intercom
- Elegant entry panel with led backlight
- Up to 2 calls or users
- The product is composed by two units: the entry panel installed outside and the control unit with the SIM card installed inside the property. Better security
- The gate can be opened via regulated missed call. Only registered mobile phone numbers can have access to the system (up to 2000 missed call users are available)
- Easy programming via SMS
- Airtime check and recharge commands
- 2 outputs for activation of devices or services
- Power can be taken directly from the gate motor (12 or 24VDC) or from an external PSU.

**GSM/1002 IS PART OF THE BPT GSM INTERCOM FAMILY OF PRODUCTS AND IS THE SMALLEST UNIT AVAILABLE IN THE RANGE.**

**WITH 2 CALLS IT IS IDEAL FOR A SINGLE-FAMILY HOUSE OR A SMALL OFFICE PARK.**

The B-Cel GSM intercom system allows freedom of communication between the gate station and the residents over the GSM networks. This solution is ideal for use in environments where there is an excessive distance between a gated entrance and the building or where the entry panel needs to call a telephone number.

Residents can use their mobile phone to answer a call from the entry panel and open the gate. Once the communication is established the resident can activate various relays on the unit. This will, for example, trigger the gate to open or turn on a light or any additional service required.

The system configuration is very convenient: the entry panel is installed outside the premises. The electronics and the SIM card, is installed inside the premises, avoiding damage, vandalism and theft.

The entry panel and the GSM unit should not be installed more than 20m apart.

The GSM/1002 also includes the functionality of missed-calling: if the user calls the gate and his number is in the memory of the unit, this will recognise the user number and will open the gate at no cost.
